

**For Students of Medical Faculty  
Practical skills questions**

Upon completion of the course students should be able to:

- 1) Use correct terminology to describe and classify the appearance of skin lesions;
- 2) Recognize the appearance of common dermatoses including skin infections and infestations, eczema, dermatitis, papulo-squamous diseases, bullous disorders, and venereal diseases
- 3) Recognize common skin signs of systemic diseases;
- 4) Know basic principles for treatment and management of common skin diseases.

**Practical skills questions 1**

1.	You see red papule. How to determine whether it is inflammatory?
2.	What is the difference between vesicle and bulla?
3.	Patient has wet erosions on skin. What is the most appropriate topical treatment vehicle in this case?

**Practical skills questions 2**

1.	Patient complains on extremely prominent itching. Which lesions may prove such itching?
2.	You see scar on patient's skin. What lesion preceded the scar?
3.	Your patient has numerous pustules. What examinations are the most appropriate in this case?

**Practical skills questions 3**

1.	You see red lesions. How to determine whether they are maculae or papules?
2.	What information may be obtained during patch testing?
3.	What is the most appropriate topical treatment in case of weeping?

**Practical skills questions 4**

1.	You see whitish papule. How to determine whether scaling is present on its surface?
2.	How to determine Nikolsky sign?
3.	How to perform wet dressing?

**Practical skills questions 5**

1.	Your patient has allergic contact dermatitis. How to identify what substance is an allergen for the patient?
2.	What is the most appropriate topical treatment vehicle in case of chronicle inflammatory lesions?
3.	You were provided with a Wood's lamp to examine a patient. Which conditions are necessary for such examination?

**Practical skills questions 6**

1.	What information may be obtained during examination of skin with diascopy?
2.	Which material has to be taken as a sample for microscopy examination of fungal disease?
3.	Your patient has missed/broken hair, redness and scaling on scalp. What examinations are the most appropriate in this case?

**Practical skills questions 7**

1.	You observe crusts of dark-brown color on patient's skin. What was the probable origin for such crusts?
2.	How to check Auspitz's sign?
3.	What examination has to be done to prove that a patient has cold allergy (cold urticaria)?

**Practical skills questions 8**

1.	How to determine whether macula on patient's skin is inflammatory or not?
2.	What is the difference in action on skin between ointment and cream?
3.	You observe crusts of yellowish color on patient's skin. What was the probable origin for such crusts?
